EDUCATION

Georgia Institute of Technology, Atlanta, GA

Degree: Bachelor of Science in Computer Science

Threads: Intelligence and People

GPA: 3.7/4.0 **Graduation Date:** May 2024

- Summa Cum Laude, Zell Miller Scholarship, Dean's List, MSA, Student Government

EXPERIENCE

Invesco

Atlanta, Georgia

Advanced Platforms Engineer, Enterprise Platforms

February 2026 - Present

- Led the migration of MuleSoft Runtime Fabric (RTF) APIs to Java/Spring Boot services on Omni Gateway, reducing vCore requirements ahead of contract renewal and saving over \$50K in platform costs through API migration and decommissioning.
- Built cloud-native API services and platform automation using Java, Spring Boot, Bitbucket Pipelines, and Anypoint Platform APIs, standardizing creation, promotion, deployment, and lifecycle management.
- Partner with domain teams to release and support API services as one of two North America platform engineers, troubleshooting deployments, validating go-live readiness, and resolving production issues.
- Designed AWS-based disaster recovery and failover architecture for API workloads across CloudFront, Lambda@Edge, Route 53/DNS, networking, and MuleSoft platform services.
- Hardened CI/CD workflows with SonarQube quality gates, vulnerability scanning, dependency controls, secure credential handling, and containerized builds.

Invesco

Atlanta, Georgia

API Engineer, Enterprise Platforms

February 2025 - February 2026

- Delivered enterprise REST APIs end-to-end by authoring OpenAPI contracts, implementing Java/Spring Boot services, and validating releases with unit and integration testing.
- Designed and governed API specifications in MuleSoft Anypoint Platform and managed promotion across environments.
- Translated business capabilities into versioned API designs, ArchiMate models, and production-ready service contracts.

Invesco

Atlanta, Georgia

Investments Software Engineer, Invest Tech

July 2024 - February 2025

- Developed a portfolio trading application used by investment teams to execute buy and sell orders across portfolios.
- Designed and implemented secure REST APIs using Java and Spring Boot to support order processing and investment operations.
- Built React interfaces for portfolio management workflows.
- Automated data-transfer workflows with Python and supported deployments using Docker and Kubernetes/EKS, reducing manual handling and errors.

Invesco

Atlanta, Georgia

Software Engineering Intern

June 2023 - August 2023

- Supported data migration for the Alpha Next Gen project using SQL, Snowflake, and AWS-based data warehousing.
- Improved reporting for Legal, Compliance, Audit, and Risk teams by supporting data processing and system enhancements.

GTRI Research Lab

Atlanta, Georgia

Generative AI Research Assistant

January 2022 - May 2022

- Applied generative AI methods to research data analysis for the digital transformation team.
- Implemented data analysis and machine learning models with TensorFlow, PyTorch, Keras, scikit-learn, NumPy, and Pandas.

SKILLS

Languages/Frameworks: Java, Python, JavaScript, TypeScript, SQL, C# (Intermediate), Spring Boot, React, Bash/Shell
Cloud/DevOps: CI/CD, AWS, CloudFront, Lambda@Edge, Route 53, S3, Docker, Kubernetes/EKS, Terraform, Bitbucket Pipelines, GCP, Microsoft Azure

APIs/Integration: REST APIs, OpenAPI/OAS 3.x, MuleSoft Anypoint Platform, Runtime Fabric (RTF), Flex Gateway, Omni Gateway, API Design, API Governance, API Lifecycle Management, Enterprise Integration Patterns, JSON/YAML

Data/ML: PostgreSQL, Snowflake, ETL, GeoJSON, TensorFlow, PyTorch, Keras, scikit-learn, Pandas, NumPy

Testing/Quality: JUnit, pytest, Postman, Insomnia, SonarQube, Checkstyle, mypy, Ruff, Vulnerability Scanning, Wiz, Grype

Tools/Knowledge: Git, GitHub, Bitbucket, Maven, Gradle, Artifactory/JFrog, CyberArk, Jira, Confluence, Object-Oriented Programming, Data Structures & Algorithms, Production Support, Disaster Recovery, Performance Tuning, ArchiMate
