EXPERIENCE

Invesco **Atlanta, Georgia**
Software Engineer II, Enterprise Platforms **February 2026 - Present**

- Led migration of MuleSoft Runtime Fabric (RTF) APIs to Java/Spring Boot on Omni Gateway, saving over $50K by reducing vCore requirements through API migration and decommissioning before renewal.
- Automated API creation, promotion, and deployment with Java, Spring Boot, Bitbucket Pipelines, and Anypoint Platform APIs; cut turnaround from days to less than one hour.
- Support production APIs as one of two North America platform engineers, sustaining 99.5% uptime while troubleshooting releases and guiding domain teams through validation and go-live readiness.
- Created an AI workflow to automate Spring Boot API development from scratch, cutting delivery time from over a week to one day.
- Designed AWS disaster recovery and failover architecture for API workloads using CloudFront, Lambda@Edge, Route 53, and MuleSoft platform services.

Software Engineer, Invest Tech & Enterprise Platforms **July 2024 - February 2026**

- Developed a portfolio trading application with Java/Spring Boot APIs and React interfaces for investment teams, reducing order completion time from over 30 minutes to 5 minutes.
- Delivered secure REST APIs from OpenAPI contracts through implementation, unit and integration testing, and environment promotion; governed specifications in MuleSoft Anypoint Platform.
- Automated data-transfer workflows with Python and supported application deployments using Docker and Kubernetes/EKS.

Software Engineering Intern **June 2023 - August 2023**

- Supported Alpha Next Gen data migration and reporting for Legal, Compliance, Audit, and Risk teams using SQL, Snowflake, and AWS data warehousing.

GTRI Research Lab **Atlanta, Georgia**
Generative AI Research Assistant **January 2022 - May 2022**

- Implemented research data analysis and machine learning models with TensorFlow, PyTorch, scikit-learn, NumPy, and Pandas for the digital transformation team.

PROJECTS

VPC Networking Lab Linux, Bash, AWS, Terraform, nftables

- Built a Linux VPC model with public, private, and isolated subnets, nftables NAT, and packet captures; recreated it in AWS using Terraform, EC2, route tables, an Internet Gateway, and a NAT Gateway. Validated service access rules and fault recovery through HTTP and PostgreSQL traffic tests.

Open Source Contributions

- Merged pull requests across OpenTelemetry Java, Checkstyle, TransformerLens, LichtFeld Studio, and PMD.

EDUCATION

Georgia Institute of Technology Atlanta, GA | May 2024
Bachelor of Science in Computer Science | GPA: 3.7/4.0 | Summa Cum Laude
Threads: Intelligence and People | Zell Miller Scholarship | Dean's List

SKILLS

Languages/Frameworks: Java, Python, TypeScript, JavaScript, SQL, Bash, Spring Boot, React
Cloud/DevOps: AWS, Docker, Kubernetes/EKS, Terraform, CI/CD, Bitbucket Pipelines, GitHub Actions
APIs/Data: REST APIs, OpenAPI, MuleSoft Anypoint Platform, API Governance, PostgreSQL, Snowflake, ETL
Testing/Quality: JUnit, Testcontainers, pytest, Postman, SonarQube, Checkstyle, Vulnerability Scanning
Tools: Git, Maven, Gradle, Artifactory/JFrog, CyberArk, Jira, Confluence, ArchiMate
AI Development: Claude Code, Cursor, Codex, Model Context Protocol (MCP)
